HOW TO CALCULATE THE COST OF A SHIPMENT

- 1. Determine the destination zone of your shipment** – You can find the destination zone of your shipment on the Country Listing and Transit Times chart in this brochure. Look up the country you are sending to and note the zone code indicated.
- 2. Calculate the weight of your shipment** – You will be charged based on the greater of actual weight (kg) or volumetric weight. For more information on calculating volumetric rate refer to the diagram below
- 3. Determine the cost of your shipment** – Using your destination zone and the weight of your shipment, look up the cost of your shipment using the Export Base Rates chart in this brochure.

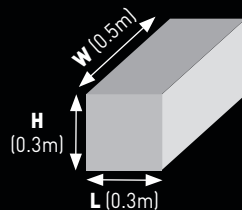

Please note the rates indicated in this brochure are exclusive of our Fuel Adjustment Factor (FAF). For the current FAF or for more information visit our website.

HOW TO CALCULATE VOLUMETRIC WEIGHT

To determine volumetric weight calculate the volume of your shipment and multiply this by a cubic conversion factor of 200.

E.g. **L** (0.3m) x **H** (0.3m) x **W** (0.5m) = 0.045 m³

0.045m³ x 200 = **9 kg volumetric weight**

You will be charged on the greater of actual weight, or volumetric weight.

Post Haste International Terms and Conditions apply to all shipments.
These can be found on our website www.posthaste.co.nz or are available on request.
Cubic conversion: 167kg = 1m³. The greater of actual weight or volumetric weight will apply.
Rates are effective as of 1st July 2010. Rates are in NZ Dollars.
